

Cablectrix Statement on the RoHS Directive

The RoHS Directive severely restricts the presence of specific toxic substances in electronic equipment at the design phase, thereby reducing the environmental impact of discarding such products at the end of their useful life. This Directive significantly restricts the use of lead (Pb), mercury (Hg), cadmium (Cd), hexavalent chromium (Cr6) and two bromine-containing flame retardants: PBB (polybrominated biphenyls) and PBDE (polybrominated diphenyl ethers).

Cablectrix have been working closely with all of our suppliers and can confirm that all of our stock is RoHS compliant. Subject to the available exemptions Cablectrix will maintain compliance with the RoHS Directive for all of its products.

All of Cablectrix Invoices and Delivery notes will show the following statement, "All parts detailed above are compliant with RoHS Directive 2011/65/EU unless otherwise stated in the product description"
